Your Treatment Day: What to Expect

You're scheduled for a regenerative therapy treatment. Here's how to prepare, what happens during your visit, and how to take care of yourself afterward.

Before your visit

- Eat a normal meal and drink plenty of water — being well-hydrated helps, especially for IV treatments.
- Take your regular medications unless your provider told you otherwise.
- Avoid anti-inflammatory medicines (ibuprofen, naproxen) for the days your provider specifies — they can work against the treatment.
- Wear comfortable clothing with easy access to the treatment area.
- Arrange a ride home if you were told sedation or a nerve block is involved.

During your visit

- Plan for roughly 45–90 minutes in the office.
- Your provider will confirm your consent and answer last questions.
- The treatment is delivered by injection or IV infusion, depending on your plan.
- Mild pressure or discomfort at the site is normal and brief.

After your visit

- Mild soreness, warmth, or fullness at the site for 24–72 hours is common.
- Ice is fine for comfort; skip anti-inflammatories unless your provider approves them.
- Ease back into activity as directed — most patients resume normal routines the next day.
- Follow the specific aftercare sheet for your protocol.

Call us if...

You develop fever over 101°F, spreading redness, severe or worsening pain, or any symptom that concerns you. Call the office number above — we would always rather hear from you.
